

Please be informed that changing mouldboards, plough shares and share points require special care to prevent damage to these parts

Take the following measures for granted

- 1) Do not tighten the bolts one after the other, tighten the bolts at the same time and gradually.
Do not use an impact wrench
- 2) Make sure you have sufficient space to work
- 3) Make sure you work clean (with all parts free from soil)
- 4) Loosen the share bolts to facilitate an easy mouldboard replacement

We can not be held responsibility in case of damage.
